

AVALON

Cottage Wood Stove Owner's Manual

- Freestanding Stove
- Mobile-Home Approved
- Alcove Approved

SAFETY NOTICE:

If this appliance is not properly installed, a house fire may result. For your safety, follow the installation directions. Contact local building or fire officials about restrictions and installation inspection requirements in your area.

Introduction

We welcome you as a new owner of an Avalon Cottage wood-burning stove. In purchasing an Avalon Cottage you have joined the growing ranks of concerned individuals whose selection of an energy system reflects both a concern for the environment and aesthetics. The Avalon Cottage is one of the finest appliances the world over. This manual will explain the installation, operation, and maintenance of this appliance. Please familiarize yourself with the Owner's Manual before operating your appliance and save the manual for future reference. Included are helpful hints and suggestions which will make the installation and operation of your new appliance an easier and more enjoyable experience. We offer our continual support and guidance to help you achieve the maximum benefit and enjoyment from your appliance.

Important Information

No other Avalon Cottage appliance has the same serial number as yours. The serial number is stamped onto the label on the back of the appliance.

This serial number will be needed in case you require service of any type.

Model: Avalon Cottage

Serial Number: _____

Purchase Date: _____

Purchased From: _____

Mail your Warranty Card Today, and Save Your Bill of Sale.

To receive full warranty coverage, you will need to show evidence of the date you purchased your appliance. Do not mail your Bill of Sale to us.

We suggest that you attach your Bill of Sale to this page so that you will have all the information you need in one place should the need for service or information occur.

We suggest that our woodburning hearth products be installed and serviced by professionals who are certified in the U.S. by the National Fireplace Institute® (NFI) as NFI Woodburning Specialists or who are certified in Canada by Wood Energy Technical Training (WETT).

Safety Precautions

- The viewing door must be closed and latched during operation.
- Never block free airflow through the air vents on this appliance.

- Gasoline or other flammable liquids must never be used to start the fire or "Freshen Up" the fire. Do not store or use gasoline or other flammable liquids in the vicinity of this appliance.

- This appliance is designed and approved for the burning of cord wood only. Do not attempt to burn any other type of fuel other than cord wood in this appliance, it will void all warranties and safety listings.

- Ashes must be disposed in a metal container with a tight lid and placed on a non-combustible surface well away from the home or structure.

- Do not touch the appliance while it is hot and educate all children of the danger of a high-temperature appliance. Young children should be supervised when they are in the same room as the appliance.

- Keep furniture, drapes, curtains, wood, paper, and other combustibles a minimum of 36" away from the appliance.

- This appliance must be properly installed to prevent the possibility of a house fire. The instructions must be strictly adhered to. Do not use makeshift methods or compromise in the installation.

- Contact your local building officials to obtain a permit and information on any installation restrictions or inspection requirements in your area. Notify your insurance company of this appliance as well.

- Inspect the chimney connector and chimney at least twice monthly and clean if necessary. Creosote may build up and cause a house fire.
- Do not connect this appliance to any chimney serving another appliance.

- This appliance must be connected to a listed high temperature (HT) residential type chimney or an approved masonry chimney with a standard clay tile, or stainless steel liner.

- When installed in a mobile home, this appliance must be bolted to the floor, have outside air, and not be installed in the bedroom (Per H.U.D. requirements). Check with local building officials.

- Do not place clothing or other flammable items on or near this appliance.

- Never try to repair or replace any part of this appliance unless instructions are given in this manual. All other work must be done by a trained technician.

- Do not make any changes or modifications to an existing masonry fireplace or chimney to install this appliance.
- Do not make any changes to the appliance to increase combustion air.

- Allow the appliance to cool before carrying out any maintenance or cleaning.

- Overfiring the appliance may cause a house fire. If a unit or chimney connector glows, you are overfiring.

- Maintain the door and glass seal and keep them in good condition.
- Avoid placing wood against the glass when loading. Do not slam the door or strike the glass.

- Do not use a grate or other device to elevate the fire off of the firebox floor. Burn the fire directly on the bricks.

- Do not throw this manual away. This manual has important operating and maintenance instructions that you will need at a later time. Always follow the instructions in this manual.

- Travis Industries, Inc. grants no warranty, implied or stated, for the installation or maintenance of your appliance, and assumes no responsibility of any consequential damage(s).**

Installation Options:

- Freestanding
- Freestanding in an Alcove
- Freestanding in a Mobile Home

Features:

- EPA Phase II Approved
- 1.8 Cubic Foot Firebox Volume
- Single Operating Control
- Accepts Logs Up to 20" Long
- 5/16" and 3/16" Steel Plate Construction
- Heavy Duty Refractory Firebrick
- Optional High-Tech Blower

Heating Specifications:

Approximate Maximum Heating Capacity (in square feet)*	600 to 1,200
Maximum BTU's per Hour (Cord Wood Calculation)	71,000
Overall Efficiency (Oregon Method)	70.3 %
Maximum Burn Time	Up to 9 Hours

* Heating capacity will vary depending on the home's floor plan, degree of insulation, and the outside temperature. It is also affected by the quality and moisture level of the fuel.

Dimensions:

Measure clearances from the stove top.

Emissions:

2.9 Grams Per Hour (EPA Phase II Approved) – Tests conducted by Omni Test Lab.

Weight: 300 Lbs.

SAFETY NOTICE:

If this appliance is not properly installed, a house fire may result. For your safety, follow the installation directions. Contact local building or fire officials about restrictions and installation inspection requirements in your area.

Planning The Installation

We suggest that you have an authorized Travis Industries dealer install your stove. If you install the stove yourself, your authorized dealer should review your plans for installation.

Check with local building officials for any permits required for installation of this stove and notify your insurance company before proceeding with installation.

Preparation for Installation

- Check for damage to the exterior of the stove (dents should be reported, scratches can be fixed by applying touch up paint).
- Check the interior of the firebox (replace cracked firebrick and make sure baffle is in place).

The stove can be lightened by removing the firebricks and baffle. - see page 27.

Stove Installation Considerations

The table below details the six most common types of installations and the considerations for each type. Alternative methods of installation are available if they comply with local building codes.

<u>Installation Type</u>	<u>Considerations</u>
Standard Ceiling with a Factory Built Chimney (Page 14)	• Requires ceiling and roof penetration • Provides best draft
Cathedral Ceiling with a Factory Built Chimney (Page 14)	• Cathedral style chimney support required • Provides best draft
Exterior Factory Built Chimney (Page 15)	• Uses two elbows to route chimney outside • Exterior chimney is hidden from the room • Elbows reduce draft • Optional exterior chase reduces cold air blockage
Hearth Stove Positive Connection (Page 15)	• Utilizes existing masonry or zero clearance (metal) chimney • Provides good draft due to full reline • Easier to clean than direct or horizontal hearth stove
Hearth Stove Direct Connection (Page 16)	• Utilizes existing masonry or zero clearance (metal) chimney • Requires construction of a "block-off plate" • Draft reduced due to elbows & chimney cross section
Hearth Stove Horizontal Connection (Page 16)	• Utilizes existing masonry chimney (not approved for zero clearance (metal) fireplaces) • Draft is good because of vertical section above stove

Leg Installation

Attach each leg to the stove by inserting a bolt and washer through the hole in the leg and into the threaded hole on the stove.

9/16" Socket Wrench

These rubber-tipped bolts are for leveling the stove. Make sure they contact the floor. Do not adjust with weight on the legs, the rubber tips may tear.

Floor Protection Requirements

Floor protection must be non-combustible and at least .018" thick (26 gauge).

Measure minimum floor protection from the stove top.

Stove Placement Requirements

Clearances may be reduced by methods specified in NFPA 211, listed wall shields, pipe shields, or other means approved by local building or fire officials.

- Stove must be placed so that no combustibles are within, or can swing within (e.g. drapes, doors), 36" of the front of the stove
- If the stove is placed in a location where the ceiling height is less than 7', it must follow the requirements in the section "Alcove Installation Requirements"
- Must maintain the clearances to combustibles listed below (drywall, furniture, etc.):

Clearances

Minimum Clearance (See the illustration above)		Singlewall Connector	Reduced Clearance*
A	Sidewall to stove	18"	18"
B	Backwall to stove	18"	11-1/2"
C	Cornerwall to stove	10"	10"
D	Connector to sidewall	27-3/4"	27-1/4"
E	Connector to backwall	19-1/2"	12-1/2"
F	Connector to cornerwall	19"	18-1/2"

***Reduced clearance installations require one of the chimneys and connectors listed below:**

- DURAVENT model DVL with DURATEC chimney
- DURAVENT model DVL with DURA-PLUS chimney
- AMERI-TEC model DCC with model HS chimney
- SECURITY model DL with SECURITY model ASHT or S2100 chimney
- METAL-FAB model DW with TG chimney
- GSW Double Wall Chimney Connector with Super Chimney Twenty-One
- SELKIRK METALBESTOS model DS connector with model SSII chimney
- I.C.C. Excel (2100-2 Can.) (103-HT USA) chimney with HP connector
- Standard Masonry Chimney with any one of the above listed connectors

NOTE: Standard residential installations with reduced clearance connector may use the clearance determined by the manufacturer of the connector for the connector to wall clearance or the clearance listed in this manual. Offsets must be used to maintain the stove to wall clearance.

NOTE: Reduced clearance connectors may not connect to the flue collar – order an appliance adapter for the connector being used.

Chimney Requirements

- Chimney connector must be a minimum 24 MSG black or 26 MSG blued steel
- Use 6" diameter type HT chimney from one manufacturer (do not mix brands). Chimney must be used from the first floor or wall penetration to the chimney cap.
- Chimney connector and chimney must be fastened to the stove and each adjoining section
- Follow the chimney manufacturer's clearances and requirements
- Use the chimney manufacturer's fire stops, attic guards, roof supports, and flashings when passing through a ceiling or thimble when passing through a combustible wall
- No more than 180° of elbows (two 90° elbows, or two 45° & one 90° elbow, etc.)

NOTE: Additional elbows may be allowed if draft is sufficient. Whenever elbows are used the draft is adversely affected. Additional chimney height may be required to boost draft.

Drafting Performance	This appliance relies upon natural draft to operate. External forces, such as wind, barometric pressure, topography, or factors of the home (negative pressure from exhaust fans, chimneys, air infiltration, etc.), may adversely affect draft. Travis Industries can not be responsible for external forces leading to less than optimal performance.
-----------------------------	---

- Standard residential installations may use single-wall connector (Mobile-Homes may **not**)
- Standard residential installations with reduced clearance connector may use the clearance determined by the manufacturer of the connector for the connector to wall clearance or the clearance listed in this manual. Offsets must be used to maintain the stove to wall clearance. Mobile homes must use the clearances listed in this manual under "Additional Requirements for Mobile Home Installations".

Chimney Termination Requirements

- Must have an approved cap (to prevent water from entering)
- Must not be located where it will become plugged by snow or other material
- Must terminate at least 3' above the roof **and** at least 2' above any portion of the roof within 10'

Slanted Roofs

Chimney must extend 3' above the roof

Chimney must extend 2' above any portion of the roof within 10' of the chimney

Flat Roofs

Chimney must extend 3' above the roof

Chimney must extend 2' above any portion of the roof within 10' of the chimney

Outside Air Requirements

- Required for mobile homes & in certain localities (check with building officials)
- Must not be drawn from an enclosed space (garage, unventilated crawl space)
- Requires the optional outside air boot (see page 31).

HINT:

When using outside air, find a location where the chimney and outside air hole do not interfere with structural members of the home.

A hole must be cut through the floor protection and floor and the rodent screen nailed in place here (see the optional equipment instructions for exact sizes)

NOTE:

Air may be drawn from a ventilated crawl space or through an air duct.

Maximum duct length is 15' with a cross section of 16 square inches (e.g. 8" by 2" duct). If under 5' long, the cross section may be a minimum 12 square inches.

Alcove Installation Requirements

Whenever the stove is placed in a location where the ceiling height is less than 7' tall, it is considered an alcove installation. Because of the reduced height, the special installation requirements listed below must be met.

- Chimney connector and chimney must be one of the following types:

- DURAVENT model DVL with DURATEC chimney
- DURAVENT model DVL with DURA-PLUS chimney
- AMERI-TEC model DCC with model HS chimney
- SECURITY model DL with SECURITY model ASHT or S2100 chimney
- METAL-FAB model DW with TG chimney
- GSW Double Wall Chimney Connector with Super Chimney Twenty-One
- SELKIRK METALBESTOS model DS connector with model SSII chimney
- I.C.C. Excel (2100-2 Can.) (103-HT USA) chimney with HP connector
- Standard Masonry Chimney with any one of the above listed connectors

Minimum Clearance (See the illustration above)		Combustible Alcove	Non-Combustible Alcove
A	Sidewall to stove	18"	8"
B	Backwall to stove	11-1/2"	3"
D	Connector to sidewall	27-1/4"	17-1/4"
E	Connector to backwall	12-1/2"	4-1/2"
G	Maximum Depth of Alcove	48"	48"
H	Minimum Width of Alcove	61-1/8"	41-1/8"
J	Minimum Height of Alcove	84"	6" Above Stove Top

- Alcoves are classified as combustible or non-combustible. Non-combustible alcoves must have walls and a ceiling that are 3 1/2" thick of a non-combustible material (brick, stone, or concrete). This non-combustible material must be spaced and ventilated at least 1" off of all combustible materials (walls, ceiling, etc.) to allow air to move around the non-combustible walls and ceiling. All other alcoves are considered combustible. The clearances below must be met:

Mobile Home Requirements

- Outside air must be installed - see "Outside Air Requirements" on page 11
- Chimney connector and chimney must be one of the following types:
 - DURAVENT model DVL with DURATEC chimney
 - DURAVENT model DVL with DURA-PLUS chimney
 - AMERI-TEC model DCC with model HS chimney
 - SECURITY model DL with SECURITY model ASHT or S2100 chimney
 - METAL-FAB model DW with TG chimney
 - GSW Double Wall Chimney Connector with Super Chimney Twenty-One
 - SELKIRK METALBESTOS model DS connector with model SSII chimney
 - I.C.C. Excel (2100-2 Can.) (103-HT USA) chimney with HP connector
 - Standard Masonry Chimney with any one of the above listed connectors

NOTE: Reduced clearance connectors may not connect to the flue collar – order an appliance adapter for the connector being used.

- Stove placement must maintain the following clearances to combustibles (drywall, furniture, etc.)

Minimum Clearance (See the illustration below)		Reduced Clearance Connector
A	Sidewall to stove	18"
B	Backwall to stove	11-1/2"
C	Cornerwall to stove	10"
D	Connector to sidewall	27-1/4"
E	Connector to backwall	12-1/2"
F	Connector to cornerwall	18-1/2"

- If using offsets, use the connector clearance listed to the right, **not the connector manufacturer's clearance.**
- The appliance must be secured to the floor (not required in all areas - consult your building official). Secure the outside air boot to the floor and stove to insure the stove does not dislocate.
- The appliance must be grounded to the chassis of the mobile (not required in all areas - consult your building official).
- The appliance must not be located in the bedroom of a mobile home (not required in all areas - consult your building official).

Standard Ceiling with a Factory Built Chimney

Cathedral Ceiling with a Factory Built Chimney

Exterior Factory Built Chimney

NOTE:

Exterior chimneys are subject to greater moisture and creosote accumulation due to the lower temperatures. An insulated chase will reduce these accumulations (the proper clearances to the chimney must be maintained).

Hearth Stove Positive Connection

NOTE:

Most factory-built chimney manufacturers make stainless steel chimney liners, either flexible or rigid. This provides a wide variety of installation options. Make sure to follow the manufacturer's instructions for installation and support.

NOTE: The entire fireplace and chimney must be clean, undamaged, and meet all local building codes (UBC, etc.). Damage must be repaired prior to installation. The chimney must be 15' to 33' tall.

Hearth Stove Direct Connection

NOTE:

Direct connections require installation of an airtight, non-combustible block-off plate or damper adapter.

NOTE: The chimney must have a clay tile liner. If it does not, the installation must use a positive connection (full reline). The entire fireplace and chimney must be clean, undamaged, and meet all local building codes (UBC, etc.). Damage must be repaired prior to installation. The chimney must be 15' to 33' tall.

Interior or Exterior Masonry Chimney

NOTE:

This type of installation requires a UBC approved masonry connector or a factory built (U.L. Listed) wall thimble.

NOTE: The chimney must have a clay tile liner. If it does not, the installation must use a positive connection (full reline). The entire fireplace and chimney must be clean, undamaged, and meet all local building codes (UBC, etc.). Damage must be repaired prior to installation. The chimney must be 15' to 33' tall.

See the section "Stove Placement Requirements" for minimum clearances required.

Chimney connector sections

See the section "Floor Protection Requirements"

Safety Notice:

If this appliance is not properly installed, a house fire may result. For your safety, follow the installation directions. Contact local building or fire officials about restrictions and installation inspection requirements in your area.

Read and follow all of the warnings on pages 4 and 5 of this manual.

Before Your First Fire

Verify the Installation

Before starting the stove, verify that the stove is properly installed and all of the requirements in this manual have been followed.

Keep all flammable materials 36" away from the front of the stove (drapes, furniture, clothing, etc.).

Curing the Paint

This heater uses a heat-activated paint that will emit some fumes while starting the first fire. Open doors and windows to the room to vent these fumes. This typically lasts two to four hours. You may also notice oil burning off of the interior of the heater. This rust-stopping agent will soon dissipate.

2 to 4 hours

Over-Firing the Stove

This stove was designed to operate at a high temperature. But due to differences in vent configuration, fuel, and draft, this appliance can be operated at an excessive temperature. If the stove top or other area starts to glow red, you are over-firing the stove. Shut the air control down to low and allow the stove to cool before proceeding.

Opening the Door

Rotate
the door
handle.

Swing
the door
open.

The door becomes hot during use. Use a glove to open the door if the handle is hot.

To prevent smoke from entering the room, open the door a small amount and let air enter the firebox. This stabilizes the air flow before opening the door completely.

Starting a Fire

Since the dawn of time man has debated the best way to start a fire. Some use the boy-scout "tee-pee", some prefer the "tic-tac-toe" stack. Either way, review the hints and warnings below to ensure proper fire starting.

- Make sure the air control is pushed in. If additional air is needed, open the doors 1/4" during the first five minutes of start-up.

Never use gasoline, gasoline-type lantern fuel, kerosene, charcoal lighter fluid, or similar liquids to start or "freshen up" a fire in this stove. Keep all such liquids well away from the stove while it is in use.

If using a firestarter, use only products specifically designed for stoves - follow the manufacturer's instructions carefully.

If the smoke does not pass up the chimney, ball up one sheet of newspaper, place it in the center of the grate and light it. This should start the chimney drafting (this eliminates "cold air blockage").

Use plenty of kindling to ensure the stove reaches a proper temperature. Once the kindling is burning rapidly, place a few larger pieces of wood onto the fire.

Adjusting the Burn Rate

Use the air control slider to control the burn rate of the stove. See the illustration below for details.

Approximate Air Control Settings:

Overnight Burn	Fully closed to 1/64" open
Medium Burn.....	1/64" open to 1/32" open
Medium High Burn	1/32" open to 1/16" open
High Burn.....	1/16" to fully open

The air control becomes hot during operation - use gloves or a tool to prevent burns.

The air control may take several minutes to influence the burn rate. When making adjustments, you may wish to let the stove burn for 10 minutes to gauge performance.

Ash Removal

Ashes should be placed in a metal container with a tight fitting lid. The closed container of ashes should be placed on a noncombustible floor or on the ground, away from all combustible materials, pending final disposal. Ashes should be retained in the closed container until all cinders have thoroughly cooled.

Optional Blower Operation

The blower will turn on once the stove is up to temperature. This is typically 15 to 30 minutes after starting the fire. Follow the directions below to alter the blower speed.

OFF

Turn the dial all the way counter-clockwise until it clicks off.

HIGH

The high position is all the way counter-clockwise, without clicking off.

LOW

Turn the dial all the way clockwise.

The blower may be used to affect heat output (i.e.: to reduce heat output, turn the blower down).

Re-Loading the Stove

Follow the directions below to minimize smoke spillage while re-loading the stove.

- 1 Push the air control all the way in (high burn).
- 2 Open the door slightly. Let the airflow inside the firebox to stabilize before opening the doors fully.
- 3 Load wood onto the fire.

Overnight Burn

This stove is large enough to accommodate burn times up to eight hours. Follow the steps below to achieve an overnight burn.

- 1 Move the air control to high burn and let the stove become hot (burn for approximately 15 minutes).
- 2 Load as much wood as possible. Use large pieces if possible.
- 3 Let the stove burn on high for 15 minutes to keep the stove hot, then turn the air control to low.
- 4 In the morning the stove should still be hot, with embers in the coal bed. Stir the coals and load small pieces of wood to re-ignite the fire, if desired.

Differences in chimney height and draft may lower overall burn times.

Normal Operating Sounds

Creaks and Clicks:

The 3/16" and 5/16" steel may creak or click when the stove heats up and cools down - this is normal.

Blower Sounds:

The blower will make a slight "hum" as it pushes air through the stove.

Hints for Burning

- Get the appliance hot before adjusting to low burn
- Use smaller pieces of wood during start-up and high burns to increase temperature
- Use larger pieces of wood for overnight or sustained burns
- Stack the wood tightly together to establish a longer burn
- Leave a bed of ashes (1/2" deep) to allow for longer burns
- Be considerate of neighbors & the environment: burn dry wood only
- Burn small, intense fires instead of large, slow burning fires when possible
- Learn your appliance's operating characteristics to obtain optimum performance

Selecting Wood

Dry Wood is Key

Dry wood burns hot, emits less smoke and creates less creosote.

Testing Wood Moisture

Split wood stored in a dry area will be fully dry within a year. This insures dry wood. If purchasing wood for immediate use, test the wood with a moisture meter. Some experienced wood burners can measure wood moisture by knocking pieces together and listening for a clear "knock" and not a "thud".

Why Dry Wood is Key

Wet wood, when burned, must release water stored within the wood. This cools the fire, creates creosote, and hampers a complete burn. Ask any experienced wood burner and he or she will agree: dry wood is crucial to good performance.

Wood Cutting and Storage

Troubleshooting

Problem	Possible Cause
Smoke Enters Room During Start-Up	• Cold Air Blockage - burn a piece of newspaper to establish a draft. • Close the doors - if the flame is not getting enough air, first make sure the air control is open (all the way in). If additional air is needed, a small crack in the door is all that is needed.
Kindling Does Not Start - Fire Smolders	• Cold Air Blockage - burn a piece of newspaper to establish a draft. • Not enough starter paper - use additional newspaper if necessary. • Not enough air - first make sure the air control is open (all the way in). If additional air is needed, a small crack in the door is all that is needed.
Smoke Enters Room While Re-Loading	• Let the air stabilize before fully opening the door. Push the air control in before opening the door. Then open the door approximately 1 inch. Let air go into the firebox for a few seconds. Once the smoke appears to be flowing up the chimney consistently, open the door. • Insufficient Draft - Chimney height and outside conditions can negatively affect draft. In these cases a small amount of smoke may enter the home. Adding more pipe or a draft-inducing cap may help.
Stove Does Not Burn Hot Enough	• Wood is Wet - see the section "Selecting Wood" on page 21 for details on wood. • Insufficient Draft - Chimney height and outside conditions can negatively affect draft. In these cases the fire may burn slowly. Adding more pipe or a draft-inducing cap may help. • Air Control is Not Wide Open - Make sure the air control is all the way in. Slide the control back and forth to insure the control is not stuck.
Blower Does Not Run	• Stove is Not Up to Temperature - This is normal. The blower will come on when the stove is hot - usually 15 to 30 minutes. • Electricity is Cut to the Blower - Check the household breaker or fuse to make sure it is operable.
Stove Does Not Burn Long Enough	• This appliance burns for up to 8 hours. Depending upon wood, draft, and other factors, the burn time may be shorter. Make sure the doors are sealing and not allowing air into the firebox - See the section "Door and Glass Inspection" on page 24 for details. • Check the ash bed for coals. Often, coals are still glowing under a slight bed of flyash. By raking these into a pile you can re-start your stove quickly.

Failure to properly maintain and inspect your appliance may reduce the performance and life of the appliance, void your warranty, and create a fire hazard.

Daily Maintenance (while stove is in use)

Remove Ash (if necessary)

Ash removal is **not** required once it builds up. 1/2" to 1" of ash may be desirable because it slows the burn rate. Generally, remove ash once it has built up over 1". Follow the directions below to remove ash.

- 1 Let the stove cool completely (at least two hours after the last coal has extinguished).
- 2 Place a cloth or cardboard protector over the hearth to catch ash and protect against scratching.
- 3 Open the doors and scoop the ash into a metal container with a tight fitting lid. The closed container of ashes should be placed on a noncombustible floor or on the ground, away from all combustible materials, pending final disposal.

Improperly disposed ashes lead to fires. Hot ashes placed in cardboard boxes, dumped in back yards, or stored in garages, are recipes for disaster.

Wood-burning stoves are inherently dirty. During cleaning have a vacuum ready to catch spilled ash (make sure ash is entirely extinguished).

There are vacuum cleaners specifically made to remove ash (even if the ash is warm). Contact your dealer for details.

Clean the Glass (if necessary)

This appliance has an airwash to keep the glass clean. However, burning un-seasoned wood or burning on lower burn rates leads to dirtier glass (especially on the sides). Clean the glass by following the directions below.

Allow the stove to fully cool. Apply glass cleaner or soapy water to the inside of the glass. Wipe with newspaper or a paper towel.

For Stubborn Creosote:

Dip newspaper or a paper towel in cool ashes and wipe it on the glass. The ash acts as a light abrasive.

The glass will develop a very slight haze over time. This is normal and will not affect viewing of the fire.

Monthly Maintenance (while appliance is in use)

Make sure the appliance has fully cooled prior to conducting service.

Door and Glass Inspection

The door must form an air-tight seal to the firebox for the stove to work correctly. Inspect the door gasket to make sure it forms an air-tight seal to the firebox.

The door can be lifted off the hinges. Open the door and lift straight up to remove the door.

The door latch should pull the door against the face of the stove (but not so tight as to not allow full handle rotation). If the latch requires adjustment, follow the directions below.

Door Cam Adjustment:

To tighten the door cam, remove the door handle and discard one of the washers between the door frame and cam. To loosen the door cam, add a washer between the door frame and cam.

Check for Creosote Buildup

Creosote buildup should be checked monthly during the heating season. Either look down the chimney from the top or remove a chimney connector section. Any more than 1/4" of buildup requires chimney cleaning. Creosote develops quickest when burning at a low temperature or when burning unseasoned wood. When wood is burned slowly, it produces tar and other vapors which combine with moisture to form creosote. Creosote vapors condense in the relatively cool chimney flue and creosote residue accumulates on the flue lining. When ignited, this creosote makes an extremely hot fire.

If you are not certain of creosote inspection, contact your dealer or local chimney sweep for a full inspection. Excess creosote buildup may cause a chimney fire, that may result in property damage, injury, or death.

Yearly Maintenance

Make sure the appliance has fully cooled prior to conducting service.

Touch Up Paint

Included with the owner's pack of this appliance is a can of Stove-Brite® paint. To touch up nicks or dulled paint, apply the paint while the appliance is cool. Sand rusted or damaged areas before preparation (use 120 grit sandpaper). Clean and dry the area to prepare the surface. Wait at least one hour before starting the appliance. The touched up area will appear darker than the surrounding paint until it cures from heat. Curing will give off some fumes while curing – open windows to ventilate.

Blower Cleaning (if applicable)

The optional blower should be vacuumed every year to remove any buildup of dust, lint, etc.

Use a vacuum cleaner to remove any buildup on the screens of the blower.

Firebrick and Baffle Inspection

Use the illustration on page 27 as a reference for checking the following items. Make sure the appliance is cool before proceeding.

Baffle Firebricks - check the bricks along the ceiling of the firebox to make sure they are intact and have no gaps between them. Slide the bricks to eliminate any gaps.

Baffle Supports - make sure the front and back baffle supports in are place and not degraded. Slight scaling or rusting of the metal is normal.

Secondary Air Tubes - Check the three air tubes and collars to make sure they are intact and not severely deteriorated. Slight scaling or rusting of the metal is normal. Make sure the push pins hold the air tubes in place.

Floor and Wall Firebricks - replace any severely damaged firebrick along the side or floor of the firebox.

Door Parts

ID #	Description	Qty	Part #		ID #	Description	Qty	Part #
1	Door Frame	1	93008500		9	Door Gasket	1	99900402
2	Washers	4	(see #3)		10	Glass Channel Gasket	1	99900404
3	Door Handle Asbly	1	99900422		11	Door Decor - Handle	1	
4	Door Cam	1	99900416		12	Door Decor - Upper	1	93008501
5	3/8" Jam Nut	1	(see #3)		13	Door Décor - Lower	1	93008502
6	Glass	1	99400321		14	Door Shell Screws	12	
7	Spring Handle	1	99300603		15	Door Gasket Cement		99900409
8	Glass Retainer	1	93008504					

Replacing the Glass

The perimeter of the glass is enclosed with channel gasket to prevent damage. The glass retainer holds the glass against the door frame and is secured with 12 screws. Remove the screws and door retainer to access the glass. When installing, do not over-tighten the screws.

Replacing the Door Gasket

The door gasket inserts into the outer groove of the door frame. Stove gasket cement holds it in place. Before installing, remove any residual cement. Lay the gasket in place (start at the upper left corner) and cut off any excess gasket (do not stretch the gasket. The cement fully cures with heat from the stove. You may need to open and close the door repeatedly to get the gasket to seat fully.

Replacing the Door Handle

The door handle consists of several components. See the illustration above for a component list and installation order. For details on adjusting the door handle see page 25.

Firebox Parts

ID #	Description	Qty	Part #		ID #	Description	Qty	Part #
1	Baffle Support Rear	1	98900309		7	Firebrick, 4.25" x 9"	1	251-00012

Floor and Side Firebrick Removal & Replacement

Do not pry firebrick - they chip and crack easily. Remove the floor firebricks first. The side firebrick are removed later because they are pinned in place by the floor firebrick. Clean the firebox prior to replacing the firebrick.

Baffle Removal & Replacement

Air Tube Removal & Replacement

The front and middle air tubes are identical. The rear air tube has air holes that are farther apart.

Limited 7 Year Warranty

29

To register your TRAVIS INDUSTRIES, INC. 7 Year Warranty, complete the enclosed warranty card and mail it within **ten (10)** days of the appliance purchase date to: TRAVIS INDUSTRIES, INC., 4800 Harbour Pointe Blvd. SW, Mukilteo, WA 98275. TRAVIS INDUSTRIES, INC. warrants this gas appliance (appliance is defined as the equipment manufactured by Travis Industries, Inc.) to be defect-free in material and workmanship to the original purchaser from the date of purchase as follows:

Check with your dealer in advance for any costs to you when arranging a warranty call.
Mileage or service charges are not covered by this warranty. This charge can vary from store to store.

Years 1 & 2 - COVERAGE: PARTS & LABOR

Firebox Assembly:

Firebox, Baffle Supports, Air Tubes, Air Channels, Convection Chamber

Door Assembly:

Solid Brass or Cast Door, Latch Assembly, Glass Retainers

Plated Finish

Plated Door, Legs, etc... See "Conditions & Exclusions" # 9 below.

Air Control Assembly

Slider Plate, Pressure Plate

Exclusions: Paint, Gasketing

Ceramic Glass

Glass (breakage from thermal shock)

Firebrick

Breakage from thermal shock

Accessories

Legs, Pedestal, Panels, Blower

Re-Installation Allowance

In cases where heater must be removed from home for repairs, a partial cost of re-installation is covered (pre-authorization required)

One-Way Freight Allowance

One-way freight allowance on pre-authorized repair done at factory is covered.

Years 3 Through 5 - COVERAGE: PARTS & LABOR

Firebox Assembly:

Firebox, Baffle Supports, Air Tubes, Air Channels, Convection Chamber

Air Control Assembly

Slider Plate, Pressure Plate

Exclusions: Paint, Gasketing, Plated Finish, Accessories (Legs, Pedestal, Panels, Blower), Glass, Firebrick, Re-Installation Allowance

Door Assembly:

Solid Brass or Cast Door, Latch Assembly, Glass Retainers

One-Way Freight Allowance

One-way freight allowance on pre-authorized repair done at factory is covered.

Years 6 & 7 - COVERAGE: PARTS ONLY

Firebox Assembly:

Firebox, Baffle Supports, Air Tubes, Air Channels, Convection Chamber

Exclusions: Paint, Gasketing, Plated Finish, Accessories (Legs, Pedestal, Panels, Blower), Glass, Firebrick, Re-Installation Allowance, One-Way Freight Allowance, Labor

Door Assembly:

Solid Brass or Cast Door, Latch Assembly, Glass Retainers

Air Control Assembly

Slider Plate, Pressure Plate

CONDITIONS & EXCLUSIONS

1. This new appliance must be installed by a qualified installer. It must be installed, operated, and maintained at all times in accordance with the instructions in the Owner's Manual. Any alteration, willful abuse, accident, neglect, or misuse of the product shall nullify this warranty.
2. This warranty is nontransferable, and is made to the ORIGINAL purchaser, provided that the purchase was made through an authorized Travis dealer.
3. Discoloration and some minor expansion, contraction, or movement of certain parts and resulting noise, is normal and not a defect and, therefore, not covered under warranty. Over-firing (operation where the steel may glow red) of this appliance can cause serious damage and will nullify this warranty.
4. The warranty, as outlined within this document, does not apply to the chimney components or other Non-Travis accessories used in conjunction with the installation of this product. If in doubt as to the extent of this warranty, contact your authorized Travis retailer before installation.
5. Travis Industries will not be responsible for inadequate performance caused by environmental conditions such as nearby trees, buildings, roof tops, wind, hills or mountains or negative pressure or other influences from mechanical systems such as furnaces, fans, clothes dryers, etc.
6. This Warranty is void if:
 - a. The unit has been operated in atmospheres contaminated by chlorine, fluorine or other damaging chemicals.
 - b. The unit is subject to submersion in water or prolonged periods of dampness or condensation.
 - c. Any damage to the unit, combustion chamber, heat exchanger or other components due to water, or weather damage which is the result of, but not limited to, improper chimney/venting installation.
7. Exclusions to this 7 Year Warranty include: injury, loss of use, damage, failure to function due to accident, negligence, misuse, improper installation, alteration or adjustment of the manufacturer's settings of components, lack of proper and regular maintenance, damage incurred while the appliance is in transit, alteration, or act of God.
8. This 7 Year warranty excludes damage caused by normal wear and tear, such as paint discoloration or chipping, worn or torn gasketing, chipped or cracked firebrick, etc. Also excluded is damage to the unit caused by abuse, improper installation, modification of the unit, or the use of fuel other than that for which the unit is configured (use cord wood only).
9. Damage to brass or plated surfaces caused by fingerprints, scratches, melted items, or other external sources left on the surfaces from the use of abrasive cleaners is not covered in this warranty. Damage to the surfaces from over-firing (operation where the steel may glow red) is not covered in this warranty.
10. TRAVIS INDUSTRIES, INC. is free of liability for any damages caused by the appliance, as well as inconvenience expenses and materials. Incidental or consequential damages are not covered by this warranty. In some states, the exclusion of incidental or consequential damage may not apply.
11. This warranty does not cover any loss or damage incurred by the use or removal of any component or apparatus to or from the Travis appliance without the express written permission of TRAVIS INDUSTRIES, INC. and bearing a TRAVIS INDUSTRIES, INC. label of approval.
12. Any statement or representation of Travis products and their performance contained in Travis advertising, packaging literature, or printed material is not part of this 7 year warranty.
13. This warranty is automatically voided if the appliance's serial number has been removed or altered in any way. If the appliance is used for commercial purposes, it is excluded from this warranty.
14. No dealer, distributor, or similar person has the authority to represent or warrant Travis products beyond the terms contained within this warranty. TRAVIS INDUSTRIES, INC. assumes no liability for such warranties or representations.
15. Travis Industries will not cover the cost of the removal or re-installation of hearths, facing, mantels, venting or other components.
16. If for any reason any section of this warranty is declared invalid, the balance of the warranty remains in effect and all other clauses shall remain in effect.
17. This 7 year warranty is the only warranty supplied by Travis Industries, Inc., the manufacturer of the appliance. All other warranties, whether express or implied, are hereby expressly disclaimed and purchaser's recourse is expressly limited to the warranties set forth herein.

IF WARRANTY SERVICE IS NEEDED:

1. If you discover a problem that you believe is covered by this warranty, you MUST REPORT it to your Travis dealer WITHIN 30 DAYS, giving them proof of purchase, the purchase date, and the model name and serial number.
2. Travis Industries has the option of either repairing or replacing the defective component.
3. If your dealer is unable to repair your appliance's defect, he may process a warranty claim through TRAVIS INDUSTRIES, INC., including the name of the dealership where you purchased the appliance, a copy of your receipt showing the date of the appliance's purchase, and the serial number on your appliance. At that time, you may be asked to ship your appliance, freight charges prepaid, to TRAVIS INDUSTRIES, INC. TRAVIS INDUSTRIES, INC., at its option, will repair or replace, free of charge, your appliance if it is found to be defective in material or workmanship within the time frame stated within this 7 year warranty. TRAVIS INDUSTRIES, INC. will return your appliance, freight charges (years 1 to 5) prepaid by TRAVIS INDUSTRIES, INC., to your regional distributor, or dealership.
4. Check with your dealer in advance for any costs to you when arranging a warranty call. Mileage or service charges are not covered by this warranty. This charge can vary from store to store.

CONTACT LOCAL BUILDING OR FIRE OFFICIALS ABOUT
INSTALLATION AND RESTRICTIONS IN YOUR AREA.

LISTED SOLID FUEL BURNING APPLIANCE SUITABLE FOR USE IN
RESIDENTIAL, ALCOVE AND MOBILE HOME INSTALLATIONS.

AVALON™

MODEL: TESTED TO UL 1482, ULC-S627, CSA B366.2
COTTAGE Room Heater, Solid Fuel Type - Also For Use In Mobile Homes **SERIAL**
NUMBER 

PREVENT HOUSE FIRES - Install and use only in accordance with the manufacturer's installation and operating instructions. Contact your local building or fire officials about restrictions and installation inspection in your area. Refer to local building codes and manufacturer's instructions for precautions required for passing a chimney through a combustible wall or ceiling. Do not run a chimney connector through a combustible wall or ceiling. Do not connect this unit to a chimney flue serving another appliance. Clearances may be reduced by methods specified in NFPA 211, listed wall shields, pipe shields, or other means approved by local building or fire officials. For use with solid wood fuel only (cord wood). Operate with feed door closed - open to feed fire only. Do not use a grate to elevate fire - build fire directly on hearth.

DANGER: Risk of electrical shock. Disconnect power supply before servicing. Route power cord away from unit. Do not route power cord over or under appliance.

DO NOT OVERFIRE - If heater or chimney connector glows, you are overfiring.

Inspect and clean chimney frequently - under certain conditions of use, creosote buildup may occur rapidly.

FREESTANDING INSTALLATION

STANDARD RESIDENTIAL FREESTANDING INSTALLATIONS REQUIRE: 6" diameter, minimum 24 MSG black or 25 MSG blued steel connector, with listed (type HT) factory-built chimney, suitable for use with solid fuels or masonry chimney. Do not install in a sleeping room of a mobile home.

ALCOVE INSTALLATIONS REQUIRE: One of the Listed doublewall connectors listed below. Maximum alcove depth 48", minimum alcove height 84", minimum alcove width 61-1/8".

MOBILE HOME INSTALLATIONS REQUIRE: One of the Listed doublewall connectors listed below. Mobile home installations also require outside air - use the Avalon optional outside air boot.

DOUBLEWALL CONNECTORS

- DURAVENT model DVL with DURATEC chimney
- DURAVENT model DVL with DURA-PLUS chimney
- AMERI-TEC model DCC with model HS chimney
- SECURITY model DL with SECURITY model ASHT or S2100 chimney
- GSW model Super Chimney Twenty-One connected directly to appliance
- SELKIRK METALBESTOS model DS connector with model SSII chimney
- ICC EXCEL (2100-2 Can.) (103-HT USA) chimney with HP connector

CLEARANCE REQUIREMENTS:	STANDARD RESIDENTIAL INSTALLATION (SINGLEWALL CONNECTOR)	MOBILE HOME AND ALCOVE INSTALLATIONS (DOUBLE WALL CONNECTOR)
A. SIDEWALL TO UNIT	18.0"	18.0"
B. BACKWALL TO UNIT	18.0"	11.5"
C. CORNERWALL TO UNIT	10.0"	10.0"
D. SIDEWALL TO CONNECTOR	27.75"	27.25"
E. BACKWALL TO CONNECTOR	19.5"	12.5"
F. CORNERWALL TO CONNECTOR	19.0"	18.5"

MINIMUM CLEARANCES TO COMBUSTIBLES:

NON-COMBUSTIBLE FLOOR PROTECTOR

OPTIONAL EQUIPMENT: Rear Blower
Electrical rating: 115V, 60 Hz., 1.8 Amps
Replace glass only with AVALON supplied
ceramic glass (5mm).

Outside Air Boot Installation (Part number 99200134)

The outside air boot routes outside air to the stove for combustion. Refer to the section "Outside Air Requirements" on page 11 for installation concerns. The directions below detail installation.

1 Install the cover plate following the directions below.

2 Refer to the illustration below to determine the location and size of the hole penetrating the floor and. Cut the hole prior to locating the stove.

3 Attach gasket to the bottom edge of the lower air boot section (near the screen). Attach gasket on top of the flanges on the upper air boot section. Slide the two sections together with both seams facing the rear (do not attach the two sections at this time).

4 With the legs installed, follow the directions below for attaching the upper section of the air boot (with gasket) to the stove.

5 Slide the lower section down until it contacts the hearth. Attach the two sections together following the directions below.

Rear Blower Installation (Part number 97000138)

The rear blower improves heat transfer by pushing heated air through the convection channel. Operating instructions are described in the section "Blower Operation" on page 20.

- 1 The stove should be in place with the legs installed prior to installing the rear blower.
- 2 Follow the directions below to install the thermodisk.

- 3 Install the wire clip following the directions below.

Feed the two snap disk wires into the eye of the wire clip. Remove all slack from the wire, making sure not to dislodge the snap disk. Pinch the eye of the wire clip to secure the wires.

WARNING:

To prevent electrical shock, the wires must be secured so they do not contact the firebox above the convection channel.

- 4 Attach the blower following the directions below.
